🟢 Ready for dispatch within 1-2 working days. Delivery time approx. 3-5 working days!

### High-performance titanium-based lubricant in paste form.

This high-quality universal product covers the majority of all lubrication and corrosion problems from -180°C to +1,400°C. Free of nickel and aluminum, protects against corrosion, prevents seizing of screw connections and plug connections as well as vibration noises (e.g. brake squeal),

## Product information

resistant to seawater and most acids,  
corrosion, pressure load up to max. 2.

---

The real alternative to ceramic pastes and other "magic agents"!

Ideally suited for nuts and bolts that are either moved very frequently or only very rarely.

This high-performance lubricant is extremely temperature-resistant, up to +1400°C.

Exhaust and manifold bolts, wheel nuts/bolts, turbocharger bolts etc.

Is also recommended by the manufacturer for use on the back of disk brake pads (backing plate, outside) as an "anti-squeak"!

The carrier material (grease) contains titanium oxide particles.

As these are already oxidized, they cannot react further with oxygen.

Titanium oxide particles are extremely pressure-resistant and can withstand very high frictional forces.

Titanium oxide particles are virtually neutral towards all other metals. They are therefore also suitable for protecting critical materials against electrochemical corrosion.

The high-performance lubricant has proven its worth in extreme conditions, e.g. metals in seawater or in sewage treatment plants.

A MUST for every mechanic and motor sports enthusiast.

Scope of delivery:

1 bag of GMP-1004, content 4 grams (or when ordering 2 pieces = 1 double bag with 2 x 4 grams), color: dark grey
